

A quantum step in mobility and flexibility.

The new innovation Highlander is a high-performance harvester for middle and strong sized timber. Due to the different possibilities to move forward, it is possible to move on roads at a speed of up to 40 km/h using only the front-axle drive. In normal harvester terrain, the highlander can move with special maneuverability due to its four controlled and driven wheels. In steep and extremely difficult terrain, the machine reaches an enormous terrain flexibility due to the synchronised step and drive movement. The Highlander offers more than the climbing ability of a chain driven machine and the advantages of a wheel driven machine.

- Enormous terrain flexibility due to synchronised step and drive movement
- Optimum maneuverability due to four controlled and driven wheels
- Endless turnable crane-cabine-unit
- Fast driving on secured roads
- Safe and well arranged cabin
- High performance harvester with flexible operation possibilities

Simple transportsolution: In a few moments a normal timber truck transform to a Highlander -transporter.

HIGHLANDER

Convincing technical datas.

Engine: Iveco 230 hp

Drive mechanism: 4x4 wheel drive

Steering mechanism: crab steering (all 4 wheels steering in one direction)

Shearing force: 30t

Crane: 24 tm, 10m reach, Endless rotation system cabine/crane

Weight: 20,5 t

Harvester head: Woody H50
Woody H60
